

# RATNAKSHA LELE

PhD Candidate    [ratnaksha.github.io](https://github.com/ratnaksha) | [rlele@ucsd.edu](mailto:rlele@ucsd.edu)

Doctoral student studying large-scale ocean circulation and linkages to global climate using observational and remote sensing data. Strong background in time series analysis, signal processing, optimization, statistical modelling. Seeking opportunities to apply data-driven frameworks on real-world engineering, business and logistics challenges.

## EDUCATION

### UC SAN DIEGO

PhD in Oceanography  
Expected 2023

### UC SAN DIEGO

Master of Science  
Physical Oceanography  
Dec 2018

### VIT UNIVERSITY

Bachelor of Technology  
Mechanical Engineering  
June 2016

## SKILLS

### Programming 5+ yrs:

Python • MATLAB • C

### ML frameworks:

Sklearn • PyTorch

### Familiar:

R • SQL • ArcGIS

## COURSEWORK

Recommender Sys. and Web Mining  
Statistical Learning  
ML for Physical Applications  
Data Analysis Methods I, II & III  
Applied Mathematics I, II & III  
Probability and Statistics  
Applied Numerical Methods  
Operations Research

## WORK EXPERIENCE

### JUPITER INTELLIGENCE INC. | ML & DATA SCIENCE INTERN

JUN 2022 – PRESENT

- Building and testing machine learning models to statistically emulate a high-resolution dynamical model to predict extreme coastal flooding scenarios for various metro areas along the United States coastline to evaluate future climate risk potential. Once in production– expected to save company ~\$0.2–0.5m.

### SCRIPPS INSTITUTION OF OCEANOGRAPHY | PhD CANDIDATE

AUG 2016 – PRESENT

- Quantified uncertainty in the role of turbulence in deep ocean circulation to within a factor of 3 by applying advanced signal processing and statistical algorithms on novel deep-ocean turbulence measurements ( $\chi_{pod}$ ) in MATLAB and Python. Contributed to NSF-funded program to make above data public to improve future climate model predictions and reliability.
- Implementing Embedded Clustering on oceanographic observational data using Non-Negative Matrix Factorization and Gaussian Mixture Models to identify unique dynamical regimes of turbulence-driven mixing in the global ocean.
- Improving inference and predictability of ocean dynamics at high resolution by training deep neural network models on remotely sensed data from NASA's GRACE mission– to advance the understanding of global spatiotemporal variability in deep ocean currents and response to climate change.

### WOODS HOLE OCEANOGRAPHIC INSTITUTION | RESEARCH FELLOW

JUNE 2015 – APRIL 2016

- Implemented time-series and spectral methods on in-situ Ice Tethered Profiler (ITP) sea-ice data, field and satellite observations to understand the dynamics and seasonal variation in sea-ice momentum and energy transfer.
- Discovered disparities in outdated ocean model parameterizations of sea-ice compared to new field observation. Recommended updating parameterization to reflect changing sea-ice conditions in the Arctic; now published in *Elementa: Science of the Anthropocene*. [[pdf](#)]

## AWARDS

2020 NASA Future Investigator in Earth and Space Science Fellowship Grant  
2020 NASA JPL Center for Climate Science Summer School  
2017 Departmental Travel Award for Research Excellence  
2016 UC San Diego Regents Fellowship  
2016 VIT University Special Achiever Award  
2015 Woods Hole Oceanographic Institution Summer Student Fellowship  
2014 Indian Academy of Sciences Summer Research Fellowship
